Abstracts

An electrothermal actuator is a device that converts electrical energy into mechanical motion through the controlled thermal expansion of a material, typically a wax or shape-memory alloy, which expands when heated via an integrated electric heating element, thereby generating linear or rotary displacement to perform tasks such as valve operation, latching, or positioning in various applications. These actuators are valued for their self-contained design, silent operation, and ability to deliver high force in compact form factors, making them suitable for use in automotive systems, HVAC controls, appliances, medical devices, and industrial automation where precise, reliable, and maintenance-free actuation is required.

The global Electrothermal Actuator market size was estimated at USD 235.86 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.50% during the forecast period.
