Report Overview

The electrothermal constant temperature actuator is a device with a new concept for long-distance control of system flow and heat (cooling capacity). It is suitable for heating in residences, shopping malls, hotels, and central air-conditioning temperature control, as well as room-by-room temperature control. Motion is usually amplified by thermal expansion. A small amount of thermal expansion of a part of the device translates into a large amount of deflection of the entire device. Electrothermal constant temperature actuators are typically made of doped monocrystalline or polycrystalline silicon as a composite compliant member that can achieve temperature rise internally by resistive heating or by a heat source capable of localized heating.
