## Abstracts

Elevator counterweights are essential components of traction elevator systems, functioning to balance the weight of the elevator car and a portion of its passenger load, thereby reducing the energy required by the motor to lift and lower the car. Typically constructed from dense materials such as cast iron or concrete, these counterweights move in the opposite direction of the car within the hoistway, contributing to system efficiency, operational smoothness, and safety by minimizing the load on drive machinery and braking systems. Their design and mass are precisely calculated based on the elevator's specifications, including car weight, capacity, and travel height, ensuring optimal counterbalancing for energy savings and mechanical reliability.

The global Elevator Counterweights market size was estimated at USD 1850.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
