Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Elevator Door Magnetic Switch competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. The elevator door magnetic sensor is a magnetic induction device used to detect the open or closed state of the elevator door. It is usually composed of a magnet and a Hall element or a reed switch. It senses the change in the magnetic field of the elevator door at a specific position to achieve real-time monitoring and safety interlocking of the door status, preventing the elevator from running when the door is not closed properly, and ensuring the safety of passengers. This sensor is widely used in passenger elevators, freight elevators and escalator systems. Sales in 2024 are expected to be 2.05 million units, with an average price of \$350. According to data released by the National Bureau of Statistics, China's elevator production in 2022 was 1.455 million units, which was down 5.8% compared to last year. After years of development, China has become the world's largest elevator producer and consumer. More than 70% of the world's elevator manufacturing business were in Chinese mainland, and 60%-65% of the world's elevators sold in the Chinese market. According to data from the China Elevator Association, by the end of 2022, the number of elevators registered in operation in China has reached 9.65 million, and more than 15,000 elevators have been installed after acceptance.

The global Elevator Door Magnetic Switch market size was estimated at USD 717.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.50% during the forecast period.
