## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Elevator Induction Light Curtain competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. An elevator sensor light curtain is a device installed on both sides of the elevator car door to provide non-contact safety protection. It consists of multiple pairs of infrared transmitters and receivers, forming a high-density array or grating of parallel infrared beams in the elevator door area. When the car door opens or closes, if a person or object enters the light curtain area and blocks any one or more infrared beams, the system immediately triggers the protection mechanism, stopping the elevator door from closing and reopening it. This effectively prevents passengers or objects from being pinched or trapped by the car door, making it an indispensable active protection device in modern elevator safety standards. In 2024, sales reached 2.4 million units, with an average price of \$425 per unit. Annual production capacity was 400,000 units, with a gross profit margin of approximately 40%. The elevator sensor light curtain market is a steadily growing market driven by stringent safety regulations and the need to retrofit older elevators. As global standards for elevator safety continue to rise, light curtains, as a more reliable and advanced anti-pinch protection device than traditional touch panels, are being adopted by newly installed elevators and the mandatory upgrades of a large number of older elevators. The vast global elevator stock ensures a continuous and non-cyclical demand for light curtain replacement and upgrades. This rigid demand, driven by policy and safety awareness, provides a solid market foundation for light curtain manufacturers. Currently, the focus of technological competition in the elevator light curtain market has shifted to higher beam density, stronger environmental adaptability, and intelligent integration. High-end light curtain manufacturers are committed to increasing the number of beams (to prevent missing

small objects) and improving the equipment's resistance to interference and reliability in harsh environments such as strong light, dust, or rain. Future market growth will depend on integrating light curtain technology with elevator Internet of Things (IoT) management systems. This integration enables light curtains not only to prevent pinching but also to provide operational data to help diagnose early failures in the door system (such as door operator misalignment or abnormal speed), thereby enabling predictive maintenance of the elevator door system.

The global Elevator Induction Light Curtain market size was estimated at USD 1020.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.50% during the forecast period.
