### Report Overview

Ellipsometry is an optical technique used to study the dielectric properties (complex refractive index or dielectric function) of thin films. Ellipsometer is used to measure the polarization change of reflection or transmission and compare it with the model. Ellipsometry can be used to characterize the composition, roughness, thickness (depth), crystalline properties, doping concentration, conductivity and other material characteristics. It is very sensitive to the variation of the optical response of the incident radiation interacting with the material under study.
