### Report Overview

Embedded application-specific integrated circuits are integrated circuits made for specific users or specific electronic systems. The universality and mass production of digital integrated circuits has greatly reduced the cost of electronic products and promoted the popularization of computer communications and electronic products. However, it has also caused the contradiction between general and special applications, and the disconnection between system design and circuit production. At the same time, the larger the integrated circuit scale, the more difficult it is to change for special requirements when building a system. In order to solve these problems, an embedded application specific integrated circuit featuring user participation in design has emerged, which can realize the optimized design of the whole system, with superior performance and strong confidentiality.
