Abstracts

An embedded barcode scanner is a hardware component integrated directly into electronic devices such as point-of-sale (POS) systems, kiosks, tablets, or industrial equipment, designed to automatically capture and decode barcode data without requiring external peripherals. These scanners utilize imaging or laser technology to read one-dimensional (1D) or two-dimensional (2D) barcodes and transmit the decoded information to the host system for processing, enabling seamless automation in applications like retail checkout, inventory management, access control, and logistics tracking. Unlike handheld or portable scanners, embedded models are built into the device?s structure, offering a streamlined, space-saving design that enhances user convenience and operational efficiency in environments where speed, reliability, and integration are critical.

The global Embedded Barcode Scanner market size was estimated at USD 582.4 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 7.25% during the forecast period.
