Abstracts

Embedded motor driver ICs are integrated circuits designed to control and regulate the operation of electric motors?such as brushless DC (BLDC), brushed DC, or stepper motors?directly within a larger electronic system or embedded application, eliminating the need for external driver modules. These ICs typically incorporate power transistors, gate drivers, protection circuits (e.g., overcurrent, overtemperature, and undervoltage lockout), and communication interfaces (such as I2C, SPI, or PWM input), enabling precise motion control, efficiency optimization, and system-level integration in space-constrained environments like robotics, automotive systems, industrial automation, consumer appliances, and medical devices. Their key value lies in simplifying design complexity, reducing component count, improving reliability, and enabling smarter, more energy-efficient motor control with minimal external circuitry.

The global Embedded Motor Driver Ics market size was estimated at USD 2154.3 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 8.50% during the forecast period.
