Abstracts

Embedded non-volatile memory (eNVM) has become an important and essential IP that adds flexibility to electronic products and helps accelerate time-to-market. UMC (Incl. Fujitsu) offers state-of-the-art embedded non-volatile solutions to meet a variety of embedded system applications. High quality embedded non-volatile memories (eFuse, eOTP, eMTP, eE2 PROM and eFlash) can be used for trimming, redundancy, data encryption, ID, coding and programming. There are many types of eNVM available in the market, differentiated by their endurance. For example, eFlash, eE2 PROM and eMTP can be programmed multiple times, whereas eOTP and eFuse can only be programmed once. eE2 PROM has excellent endurance among these five solutions, but the trade-off is larger macro size within high density memory. To leverage density and cost, eFlash and eE2 PROM are recommended for those high density NVM applications such smart card, SIM card, MCU, etc. On the other hand, eMTP and eOTP can be recommended for medium density NVM applications such PMIC and display driver IC. For lower density eNVM requirements in general purpose applications, eFuse is suggested.

The global Embedded Non Volatile Memory Envm market size was estimated at USD 10670.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 16.60% during the forecast period.
