Report Overview

Embedded printers refer to a type of printing device that is integrated or embedded within another system, device, or equipment, rather than being a standalone device like traditional printers. These printers are designed to be an integral part of a larger product or system, serving the purpose of producing hard copy output directly from that system. The integration of the printer eliminates the need for external connections or separate printing processes, making the overall system more compact and streamlined.

Embedded printers can be found in various industries and applications, ranging from industrial automation and manufacturing to healthcare, retail, logistics, and more. They are often used when a seamless and efficient integration of printing functionality is required within a specific context, enabling users to generate physical documents or labels as part of a larger workflow without the need for separate printing steps.
