Report Overview

The carrier tape industry currently offers embossed carrier tape and punched carrier tape. The embossed carrier tape contains embossed cavities that are made by blistering the model that creates a concave shape pocket on the tape. With this method, manufacturers can provide customization for electronic components based on customer requirements. The punched carrier tape, on the other way, has penetrated cavities that were made through a die cutting methods that forms punched or semi-punched pockets on the tape. Due to the limit of the tape's thickness, the punched carrier tape is only applicable to relatively smaller electronic components.
