Report Overview

Embossed Holographic Security Transfer Film is a type of security feature used to protect products from counterfeiting. It is a film that contains intricate patterns of holographic images which can be transferred onto the surface of other materials. The embossed patterns are created by pressing a holographic master onto a film, and the resulting film can then be heat-applied to various substrates, such as banknotes, ID cards, or product packaging. The complexity of the holographic images makes counterfeiting difficult, as replicating the film's features requires advanced technology.
