## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on EMC Electromagnetic Compatibility Test Laboratory competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. EMC testing laboratories are specialized facilities designed to assess the operational stability of electronic and electrical products in electromagnetic environments and their ability to prevent interference with other equipment. By performing electromagnetic interference (EMI) and electromagnetic immunity (EMS) testing on products, these laboratories ensure that they neither emit excessive electromagnetic interference nor resist external interference in practical applications, complying with relevant national or international standards. This is an essential quality and compliance verification step before products enter the market. The EMC (Electromagnetic Compatibility) testing market is growing rapidly with the advancement of intelligent, wireless, and high-frequency electronic products. Demand for EMC testing continues to rise, particularly in high-standard industries such as automotive electronics, communications equipment, medical devices, and industrial control. Benefiting from strengthened national product quality regulation and rising barriers to entry in international markets, an increasing number of companies are requiring EMC certification to enter domestic and international markets, driving a rapid expansion in third-party testing services and laboratory development. In the future, with the development of industries such as 5G, the Internet of Things, and new energy vehicles, the EMC market will maintain steady growth and show a trend toward high-frequency, high-precision, and multi-standard integrated testing.

The global EMC Electromagnetic Compatibility Test Laboratory market size was

estimated at USD 671.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.50% during the forecast period.
