Abstracts

Emergency immobilizers are specialized medical devices designed to restrict patient movement in emergency situations, primarily to prevent further injury to the spine, neck, or limbs during extrication, transport, or initial medical treatment. They include a range of products such as cervical collars, full-body vacuum mattresses, spine boards, limb splints, and head immobilizers, often used in conjunction by paramedics, search-and-rescue teams, and hospital emergency departments. These devices are critical in trauma care protocols, aiming to stabilize patients suspected of fractures or spinal injuries until definitive diagnosis and treatment can be administered. Materials vary from rigid plastic and foam to inflatable or moldable components, with designs prioritizing rapid application, adjustability, radiolucency for imaging, and patient comfort where possible, without compromising immobilization efficacy. Their usage is governed by strict medical guidelines and training standards to ensure proper application and avoid iatrogenic harm.

The global Emergency Immobilizer market size was estimated at USD 120.34 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.80% during the forecast period.
