Abstracts

An Emergency Lights Test System (ELTS) refers to a specialized set of hardware and software components designed to automate and streamline the testing and monitoring of emergency and exit lighting systems in commercial, industrial, and public buildings. These systems ensure compliance with safety regulations?such as NFPA 101, OSHA, and local building codes?by performing scheduled functional tests (e.g., monthly 30-second tests and annual 90-minute duration tests), logging results, generating compliance reports, and alerting facility managers to failures or maintenance needs. ELTS typically integrates with central building management systems and may include features like remote testing capabilities, battery monitoring, and real-time status dashboards, ultimately reducing manual labor, improving reliability, and enhancing overall life safety preparedness.

The global Emergency Lights Test System market size was estimated at USD 350.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.50% during the forecast period.
