This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on EMG Biofeedback System competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. EMG Biofeedback System is a neurorehabilitation and training device that helps users autonomously regulate muscle function by monitoring and providing feedback on muscle electrical activity in real time. Using surface electrodes to capture EMG signals and convert them into visual or auditory feedback, the system allows users to intuitively perceive muscle tension or relaxation. This allows users to improve muscle coordination, enhance motor function, or alleviate chronic pain through conscious control. It is widely used in physical therapy, sports medicine, and neurorehabilitation. In 2024, the global average selling price of an EMG biofeedback system ranged from several thousand to tens of thousands of US dollars, depending on device type, functional configuration, and market positioning.
