Abstracts

The market for emissive layer materials encompasses a specialized class of functional compounds?primarily organic, inorganic, and hybrid semiconductors?that exhibit electroluminescence, converting electrical energy into visible light when incorporated into electronic device architectures such as organic light-emitting diodes (OLEDs), quantum-dot light-emitting diodes (QLEDs), and perovskite LEDs (PeLEDs). These materials are critical components in display and lighting technologies, with performance characteristics?including efficiency, color purity, operational lifetime, and thermal stability?directly influencing end-product quality and commercial viability. Key material subcategories include small-molecule emitters, polymeric emitters, phosphorescent and thermally activated delayed fluorescence (TADF) compounds, and various quantum dot formulations, each tailored to specific emission spectra and device configurations. The market is driven by demand from consumer electronics, automotive displays, and next-generation solid-state lighting, with ongoing research focused on improving cost-effectiveness, scalability, and environmental sustainability.

The global Emissive Layer Material market size was estimated at USD 320.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 10.45% during the forecast period.
