## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Emulsions Breakers competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Emulsion breakers or demulsifiers are chemicals used to destabilize and separate emulsions, which are mixtures of two immiscible liquids (such as oil and water). They work by reducing the surface tension at the interface between the two liquids, allowing the droplets of one liquid to come together and separate from the other. This process is essential in various industries, including oil and gas, wastewater treatment, and food processing, where the separation of oil and water is necessary for efficient operation and product quality.

The global Emulsions Breakers market size was estimated at USD 1478.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.50% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Emulsions Breakers market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
