Report Overview

Enamelled Flat Wire is a type of electrical wire that has been coated with a thin layer of enamel insulation. This enamel coating is made from a glass-like material that provides electrical insulation and mechanical protection to the wire. The wire itself is typically made from copper or aluminum, which are both excellent conductors of electricity. The flat shape of the wire allows for better flexibility and easier installation in tight spaces compared to round wires. The enamelled flat wire is commonly used in various electrical applications, such as transformers, motors, and other electrical equipment, where high voltage insulation and heat resistance are required. The enamel coating also helps to prevent short circuits and ensures the longevity of the wire by protecting it from environmental factors and physical damage.
