Report Overview:

Wet etching is a material removal process that uses liquid chemicals or etchants to remove materials from a wafer. The specific patters are defined by photoresist masks on the wafer. Materials that are not protected by this mask are etched away by liquid chemicals.In wet etching,the material being processed is contacted with an acidic or basic chemical liquid to remove unwanted areas through a chemical reaction. The acidic or basic chemical liquid utilized in this process is called the etchant, which given its inexpensiveness is surpassing from a cost perspective.
