Report Overview

An enclosed passenger boarding bridge, often called an aerobridge or aerobridge, is a covered movable bridge that connects an airport terminal to an aircraft or a seaport to a ship, allowing passengers to board and disembark directly from the terminal. without being exposed to the outdoor environment. Enclosed passenger boarding bridges are usually equipped with adjustable telescoping tubes or tunnels to provide a sealed passage for passengers to transition. They are often equipped with climate control systems that maintain a comfortable temperature inside the bridge regardless of outdoor conditions. Additionally, enclosed passenger aerobridges may have automatic or manual controls to adjust the aerobridge height, angle and alignment to accommodate different travel types. The bridges are improving passenger comfort, safety and efficiency by providing seamless, weather-proof transitions that eliminate the need for passengers to walk across the tarmac or endure inclement weather when boarding and deplaning.
