## Abstracts

The end-pump laser engraving machine is a device that uses an end-pump laser to generate a high-power laser beam for engraving processing. End-pump technology injects laser energy through the end face of the laser, allowing the laser beam to be transmitted and concentrated more efficiently. This type of laser machine is often used for high-precision engraving, marking or marking of metals, plastics, ceramics and other materials, and is widely used in marking and process processing in electronics, aviation, automobiles and other industries. Due to its high precision, fast processing and non-contact characteristics, end-pump laser engraving machines have significant advantages in the field of precision processing.

The global End Pump Laser Engraving Machine market size was estimated at USD 2676.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.50% during the forecast period.
