Abstracts

The End-Tidal CO₂ (ETCO₂) module is a medical device used to measure the concentration of carbon dioxide (CO₂) in a patient's exhaled breath during respiratory monitoring. It is commonly used in various clinical settings, including anesthesia, intensive care units, emergency departments, and during respiratory therapy. The ETCO₂ module typically consists of a sensor, monitor, and associated tubing or sampling lines. The sensor is placed between the patient's airway and the breathing circuit or respiratory support device (such as an endotracheal tube or a mask) to capture a sample of exhaled breath. The global ETCO₂ module market has experienced steady growth in recent years due to increasing demand for respiratory monitoring equipment in various healthcare settings. Factors such as the rising prevalence of respiratory diseases, growth in the geriatric population, and the need for accurate and non-invasive monitoring techniques have contributed to the market's expansion. Key players in the ETCO₂ module market include global medical device manufacturers such as Philips, Masimo Corporation, Nihon Kohden, and Medtronic, among others. These companies often offer a range of respiratory monitoring solutions, including ETCO₂ modules, capnography monitors, and related accessories. The market is driven by technological advancements, such as the development of compact and portable devices, improved accuracy, and innovations in connectivity and data management. Integration of ETCO₂ monitoring with other vital signs monitoring systems has also been observed, providing comprehensive patient monitoring solutions.

The global End-Tidal CO₂ Module market size was estimated at USD 686.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.70% during the forecast period.
