Abstracts

"End-to-end" is a concept in deep learning, which is "End-to-End (E2E)" in English. It refers to an AI model that can output the final result as long as the raw data is input. Applied to the field of autonomous driving, it means that only one model is needed to convert the perception information collected by sensors such as cameras, millimeter-wave radars, and LiDARs into specific operating instructions such as the turning angle of the vehicle's steering wheel, the depth of the accelerator pedal, and the force of the brakes, so that the car can drive automatically.

The global End-to-end Autonomous Driving market size was estimated at USD 7857.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 23.30% during the forecast period.
