Report Overview

Endobronchial Valve (EBV), is a medical device, which is implanted in an airway in the pulmonary system. These are one-way valves designed to allow air to exit the targeted lung segment without allowing reentry of the inspired air, thus leading to deflation of the emphysematous portion of the lung and volume reduction. Endobronchial valves are typically implanted using a flexible delivery catheter advanced through a bronchoscope, and thus they are minimally invasive.
