Endocrine Disruptor Testing refers to the process of evaluating substances to determine their potential to interfere with the endocrine (hormonal) system in humans and animals. These tests assess whether chemicals can mimic, block, or alter hormone functions, which can lead to adverse health effects such as developmental, reproductive, neurological, or immune system disruptions. The testing typically involves in vitro (cell-based), in vivo (animal), and computational models to identify endocrine activity, and is crucial for regulatory agencies to assess the safety of chemicals in pharmaceuticals, pesticides, and other consumer products.

The global Endocrine Disruptor Testing market size was estimated at USD 198.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.30% during the forecast period.
