Report Overview:

The stapling technology has several advantages over the traditional suturing technology such as higher accuracy, consistency, and less time required as compared to suturing by hand. Staplers are more frequently used in surgeries on the lungs and the bowel, as stapler lines are more accurate and consistent, which leads to less chances of leakage of the bowel contents or blood. Endo staplers are largely used in laparoscopic and endoscopic surgeries. They are also used in thoracic, abdominal, pediatric, and gynecological surgeries for creation of anastomosis, resection, and transection. A disposable endo cutter stapler consists of two, triple-staggered rows of staples made of titanium, which can simultaneously break a tissue into two parts. The stapler size is determined by selecting different sizes of single cartridge viz. 2.5 mm, 3.5 mm, and 4.8 mm.

The Global Endocutter Stapler Market Size was estimated at USD 681.44 million in 2023 and is projected to reach USD 1039.98 million by 2029, exhibiting a CAGR of 7.30% during the forecast period.
