Abstracts

Endometriosis (EMs) is a common gynecological disease in women caused by the implantation of endometrial cells in abnormal locations. Endometrial cells should grow in the uterine cavity, but because the uterine cavity through the fallopian tube and ovary, pelvic cavity is connected, so the endometrial cells can enter the ovary, pelvic cavity and uterus adjacent area through the fallopian tube ectopic growth. It is one of the most common gynecological diseases, but also a relatively common clinical benign disease in women of childbearing age, the disease affects 10% of women of childbearing age, in recent years shows a significant upward trend, the disease is characterized by dysmenorrhea, pelvic pain and infertility, seriously affecting women's reproductive health and quality of life.Endometriosis Treatment Market Drivers:The growing awareness and diagnosis of endometriosis, a chronic condition affecting millions of women globally, is a major driver of the market. As awareness increases among healthcare providers and patients, more women are seeking treatment options for managing symptoms such as severe pelvic pain, infertility, and menstrual irregularities. The growing demand for non-invasive treatments, such as hormonal therapies, biologics, and pain management options, is propelling market growth. Additionally, the rising focus on women's health, coupled with advancements in medical research and diagnostics, has led to more effective treatments and better outcomes. The increasing number of healthcare professionals and patient advocacy groups pushing for more research funding and improved treatment options is also helping to drive market development.Endometriosis Treatment Market Challenges:Despite the growth in treatment options, the market faces significant challenges. One major issue is the underdiagnosis and delayed diagnosis of endometriosis, as its symptoms often overlap with other conditions, which can delay access to effective treatments. Additionally, current treatments primarily focus on symptom management, and there are no definitive cures for the condition, which limits long-term solutions for patients. Many treatments,

including hormonal therapies and surgeries, may have side effects or long-term health implications, which can deter some women from seeking treatment. Furthermore, the high cost of advanced treatments and limited insurance coverage, especially for more specialized therapies, creates access barriers in some regions, limiting market penetration and growth.

The global Endometriosis Treatment market size was estimated at USD 2415.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.20% during the forecast period.
