Abstracts

Endoscope handlers generally refer to equipment used in medical endoscopy and surgery. An endoscope handler is a medical device designed to help doctors or surgeons examine and treat inside the human body without the need for traditional open surgery. The major factors driving the growth of the endoscope reprocessing market include rising cases of endoscope-related infections, increasing investments in endoscopy instruments by hospitals, and rising number of diseases requiring endoscopy. The use of endoscopic devices in the diagnosis and treatment of disease has increased. The increasing burden of respiratory diseases such as lung cancer and chronic obstructive pulmonary disease is driving the market growth during the forecast period. Furthermore, as endoscopic procedures are widely used to diagnose cancer, the rising number of cancer cases is also expected to increase the demand for endoscopy reprocessing, thereby boosting the market growth.

The global Endoscope Reprocessors market size was estimated at USD 2365.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.80% during the forecast period.
