Report Overview

Endoscope washer disinfectors (EWDs) are specialized medical devices designed to automate the cleaning and high-level disinfection of endoscopes, ensuring they are safe for reuse in clinical settings. These systems typically integrate multiple stages, including pre-cleaning, enzymatic washing, rinsing, disinfection (often using chemicals like peracetic acid or glutaraldehyde), and drying, adhering to stringent regulatory standards such as those set by the FDA, CDC, and ISO 15883. The demand for EWDs is driven by the increasing prevalence of minimally invasive surgeries, rising healthcare-associated infection (HAI) concerns, and the growing emphasis on reprocessing efficiency in hospitals and outpatient facilities. Market growth is further fueled by technological advancements, such as automated tracking systems for traceability and eco-friendly disinfectants, as well as expanding healthcare infrastructure in emerging economies. However, challenges include high equipment costs, stringent compliance requirements, and the need for trained personnel, which may hinder adoption in resource-limited settings. Key players in the market include Olympus Corporation, Steris PLC, and Getinge AB, with competition centered on innovation, reliability, and after-sales support. The market is projected to grow steadily, supported by increasing endoscopic procedures and stricter infection control protocols globally.

The global Endoscope Washer Disinfectors market size was estimated at USD 433.65 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 8.08% during the forecast period.
