Report Overview:

An endoscopic hemoclip is a small metal clip that is used to close off bleeding blood vessels during an endoscopic procedure. Endoscopic procedures are minimally invasive procedures that use a thin, flexible tube with a camera on the end (endoscope) to view the inside of the body.

Endoscopic hemoclips are typically made of titanium or stainless steel. They are available in a variety of sizes to accommodate different blood vessels. Endoscopic hemoclips are placed over the bleeding blood vessel using a special device that is inserted through the endoscope. Once the hemoclip is in place, it is closed to compress the blood vessel and stop the bleeding.
