Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Endoscopic Surgery Control System competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Endoscopic Surgery Control System production reached approximately 5,803 units, with an average global market price of around US\$ 392,000 per unit. In 2024, the global 's total production capacity of Endoscopic Surgery Control System reached 7,600 units. The industry average gross profit margin of this product reached 38%. An endoscopic surgery control system is a robotic platform that helps surgeons perform minimally invasive procedures with greater precision, stability, and control than traditional methods. These systems typically consist of a surgeon's console, a vision cart, and a robotic arm/surgical cart that holds and manipulates instruments. Key features include tremor filtering, instrument scaling, and master-slave manipulators that translate the surgeon's hand movements to the tool tips. Some advanced systems also incorporate force feedback and teleoperation capabilities. The upstream core hardware and components mainly include endoscopes (providing a field of view) and high-frequency surgical instruments (electric hooks, electric scissors, etc.). This part has extremely high requirements for optics, materials, and precision manufacturing. Robotic arms and actuators are the "hands" of the system, requiring high precision, high flexibility, and reliability. This involves precision reducers, servo motors, etc., and has long been dominated by companies from Japan and Germany. Sensing and control systems, including force sensors (key to providing force feedback) and position sensors, are the "nerves" of the system. The midstream consists of system integrators, commonly known as "surgical robot companies." System design and integration are the core and value aggregation point of the industry chain. Companies need to integrate thousands of upstream hardware and software components into a

stable, safe, and efficient complete system. Early entrants have locked in the consumables market through massive equipment installations, forming strong customer loyalty and an ecosystem moat. New entrants need to achieve breakthroughs in performance, price, or specific application scenarios. Downstream end customers and users are mainly large tertiary hospitals. Procurement decisions are usually made jointly by the hospital's equipment department, clinical department directors, and hospital management.

The global Endoscopic Surgery Control System market size was estimated at USD 2275.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 13.90% during the forecast period.
