Abstracts

Endoscopic surgery robots are advanced medical systems that integrate robotic arms, high-definition 3D visualization, and precision instruments to assist surgeons in performing minimally invasive procedures through small incisions; these systems enhance surgical accuracy, reduce tremors, and improve ergonomics for the operator, often featuring haptic feedback, motion scaling, and intuitive controls that translate a surgeon's hand movements into finer actions inside the patient's body. This technology is primarily used in specialties such as urology, gynecology, general surgery, and cardiothoracic procedures, where its benefits include shorter recovery times, reduced blood loss, and lower risk of complications compared to traditional open or manual laparoscopic surgery.

The global Endoscopic Surgery Robot market size was estimated at USD 4420.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 16.75% during the forecast period.
