### Report Overview

The endoscopy needle holder is a surgical instrument used in endoscopic procedures to hold and manipulate needles. It is specifically designed for use in minimally invasive surgeries, where small incisions are made and thin tubes (endoscopes) with attached cameras and instruments are inserted to access and visualize internal organs and tissues.

Endoscopic needle holders typically have long, thin jaws with a serrated edge that can securely hold needles of various sizes. They are also designed with a locking mechanism to prevent the needle from slipping or falling out during the procedure. The long, narrow design allows access to the surgical site through small incisions and enables precise manipulation of the needle during procedures such as biopsy, tissue sampling, or stenting.

Endoscopic needle holders may be reusable or disposable, and are made from high-quality materials like surgical-grade stainless steel or titanium alloy to ensure durability and sterility. They play a vital role in minimally invasive surgery and have greatly improved the accuracy and safety of endoscopic procedures.
