Abstracts

Endpoint Adjudication Services for Clinical Trials refer to a specialized set of processes and procedures implemented to objectively and accurately determine the occurrence and classification of endpoints in a clinical trial. Endpoints are predefined criteria that represent the key outcomes of interest, such as the success or failure of a treatment, the onset of a particular disease event, or changes in a patient's condition. These services involve a panel of independent, often expert reviewers who assess the data related to endpoints, including medical records, test results, and patient reports. By having an impartial and systematic approach to endpoint determination, endpoint adjudication services help to minimize bias and ensure the integrity of the trial results. This is crucial as accurate endpoint assessment directly impacts the validity of conclusions drawn from the clinical trial regarding the safety and efficacy of a therapeutic intervention, a diagnostic tool, or a preventive measure, thereby influencing regulatory decisions, medical practice guidelines, and patient care.

The global Endpoint Adjudication Services for Clinical Trials market size was estimated at USD 117.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.80% during the forecast period.
