Report Overview

Energy security is one of the most important and widely used terminologies used these days especially in the developed and the developing nations. We can define energy security as the ability of the nation or a country to secure the power plants and energy resources from physical attacks and cyber intrusions for uninterrupted and sustained supply of energy, to the country and its people. Securing the energy and power resources has become very important and most of the countries are taking firm measures to protect their power plants and energy resources. This need for securing the power plants has increased because of the growing terror and criminal attacks and growing sophisticated cyber attacks on the power plants and energy resources.
