Abstracts

The bidirectional AC-DC converter is the interface between the energy storage unit and the power grid, and plays an important role in the energy storage system. In recent years, the bidirectional isolated AC-DC matrix converter has been applied to the energy storage system as an interface converter, which has the advantages of bidirectional energy transmission, unity power factor on the grid side, small size, light weight and high power density. In particular, the introduction of a high-frequency transformer between the AC side and the DC side as electrical isolation makes it have strong anti-interference ability and a wide range of step-up and step-down.

The global Energy Storage Bidirectional AC-DC Converter market size was estimated at USD 582.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.50% during the forecast period.
