Abstracts

Energy storage fuses are wires made of alloy materials with high resistivity and low melting points, and are usually installed in the circuit of energy storage battery modules. When the current in the circuit rises abnormally and reaches or exceeds the rated current of the fuse, the fuse will quickly heat up and melt, thereby cutting off the circuit and preventing excessive current from damaging the energy storage system.

The global Energy Storage Fuses market size was estimated at USD 532.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.60% during the forecast period.
