Abstracts

The Energy Storage Liquid Cooling System uses liquid as the cooling medium and takes away the heat generated by the battery through convection heat transfer. Currently, commonly used media include water, ethylene glycol aqueous solution, pure ethylene glycol, air conditioning refrigerant and silicone oil. In general, the liquid cooling system has a high heat transfer coefficient, a large specific heat capacity, and a fast cooling rate. The liquid specific heat capacity is not affected by altitude and air pressure and has a wide range of applications. At the same time, the liquid cooling system has a relatively compact structure, making it occupy a relatively small space.

The global Energy Storage Liquid Cooling System market size was estimated at USD 1250.42 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 22.85% during the forecast period.
