Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Energy Storage Semi-Solid-State Battery competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Energy Storage Semi-Solid-State Battery production reached approximately 0.95GWh, with an average global market price of around US\$ 278 per kWh. Energy Storage semi-solid-state batteries are a new type of electrochemical energy storage technology between traditional liquid electrolyte batteries and all-solid-state batteries. They typically utilize a hybrid system consisting of a high-energy-density electrode material, a polymer or gel electrolyte, and a partially liquid electrolyte. This system retains the excellent ionic conductivity of liquid electrolytes while offering some of the safety and stability of solid electrolytes. Compared to traditional lithium-ion batteries, semi-solid-state batteries significantly reduce the proportion of flammable liquid electrolytes, thereby improving thermal stability and safety. Furthermore, they achieve higher energy densities (reaching over 350?400 Wh/kg) through higher cathode active material loadings, thinner separators, and more optimized electrode design.

The global Energy Storage Semi-Solid-State Battery market size was estimated at USD 264.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 23.70% during the forecast period.
