Abstracts

Engine driven railcar movers are specialized industrial vehicles designed to move individual or multiple railcars within railyards, industrial plants, ports, and manufacturing facilities where traditional locomotives are impractical or inefficient. These machines, which typically feature rubber-tired wheels and a heavy-duty pushing mechanism, are powered by internal combustion engines?commonly diesel?and are engineered for precise, low-speed maneuvering to position railcars for loading, unloading, assembly, or storage. Their key functions include eliminating the need for full-scale switching locomotives in constrained spaces, reducing operational costs, and improving safety by minimizing manual coupling and decoupling risks.

The global Engine Driven Railcar Movers market size was estimated at USD 180.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 3.50% during the forecast period.
