Abstracts

An engine nacelle fan cover is a protective aerodynamic component designed to enclose and shield the front fan section of a turbofan aircraft engine, serving as the visible outer casing that contributes to the nacelle assembly's structural integrity and functional performance. It plays a critical role in optimizing airflow into the engine, reducing drag, and protecting internal components such as fan blades from foreign object damage (FOD), while also often incorporating acoustic treatments to mitigate noise emissions. These covers are typically constructed from advanced composite materials or lightweight metals to balance durability with weight savings, and their design must adhere to stringent aviation safety and efficiency standards set by regulatory bodies.
