Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Engine Oil Cooling Device competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, the global oil cooler market will have a unit price of \$178 per unit, with sales of approximately 21.2 million units. An oil cooler is a system that uses air or liquid cooling to forcefully dissipate heat from engine oil. Composed of a cooler, piping, and a temperature control unit, it aims to maintain the oil's optimal operating temperature, safeguarding engine performance and life. It is commonly found in high-performance and heavy-duty vehicles. The future development trends of the global oil cooling system market are primarily in the following three areas:

1. **Efficiency and Integrated Design** To meet the demands of high engine power density and energy conservation and emission reduction, oil coolers will be more tightly integrated into engine modules (e.g., with the cylinder block or filter). High-performance materials (such as aluminum alloy composites) and compact fin structures will be used to improve heat dissipation efficiency while reducing space requirements, meeting the stringent thermal management requirements of hybrid and electric drive systems.
2. **Intelligent Temperature Control and Electrification Transformation** Traditional mechanical cooling systems will evolve to active circulation systems with electronic pumps. Sensors monitor oil temperature and viscosity in real time, and collaborate with the ECU to achieve dynamic adjustments (e.g., rapid preheating at low temperatures and enhanced heat dissipation at high temperatures). This will help new energy vehicles reduce thermal management energy consumption and meet the cooling needs of autonomous vehicles during long-term idling.
3. **Aftermarket Standardization and the Rise of Remanufacturing** As the global vehicle population grows, the independent aftermarket will promote standardized interface design and compatibility upgrades for cooling

systems. Furthermore, remanufacturing, through the recycling and refurbishment of core components, will reduce costs and environmental pollution, becoming a key component of a sustainable circular economy.

The global Engine Oil Cooling Device market size was estimated at USD 3774.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.30% during the forecast period.
