Abstracts

Engineer To Order (ETO) software is a specialized category of enterprise resource planning (ERP) and product lifecycle management (PLM) systems designed to support manufacturing and engineering businesses that produce highly customized, complex, or one-off products based on unique customer specifications, rather than mass-produced or standardized items. This software integrates and automates processes such as project management, engineering design, cost estimation, procurement, production scheduling, and after-sales service, enabling companies to manage the entire lifecycle of custom projects from initial quotation and design through to manufacturing, delivery, and support. Unlike configurable or assemble-to-order systems, ETO software must handle dynamic, non-repetitive workflows, extensive custom bill of materials (BOM) management, real-time collaboration between engineering and production teams, and accurate tracking of project-specific costs and timelines to ensure profitability and customer satisfaction.

The global Engineer To Order Software market size was estimated at USD 450.25 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 8.50% during the forecast period.
