Abstracts

Construction supervision services refer to professional services provided by qualified supervision institutions or professionals, which independently supervise, manage, and coordinate the entire process of a construction project, including design, construction, quality, safety, schedule, cost, and contract performance. This service aims to ensure that projects are completed with high quality and efficiency in accordance with design specifications, contract requirements, and relevant laws and regulations, while controlling risks, optimizing resource allocation, and protecting the interests of investors and the public. The downstream clients of construction supervision services are mainly government-invested infrastructure projects, real estate developers, industrial construction companies, and large-scale public utility projects, covering aspects such as design review, construction supervision, quality acceptance, safety management, schedule control, and cost auditing. Because construction supervision is a highly specialized and technically intensive service with industry qualifications and experience requirements, the supervision and management services it provides typically have stable pricing power and high added value; therefore, the overall gross profit margin is generally around 33%. Engineering supervision services are crucial in modern engineering construction. They are not only a key link in ensuring project quality, progress and cost control, but also bear important responsibilities for the safety and sustainability of the project. With the increase in project scale and complexity, professional and information-based supervision services can better prevent and resolve potential risks and ensure the transparency and standardization of the construction process. At the same time, with the development of green buildings and smart engineering, engineering supervision also needs to continuously upgrade technical means to cope with emerging technologies and environmental protection requirements and promote high-quality development of the industry.

The global Engineering Supervision Service market size was estimated at USD 1610.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 12.30% during the forecast period.
