Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Enhanced Clip-On Thermal Imager competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Enhanced clip-on thermal imager is a type of infrared imaging device designed for tactical aiming and night vision capability upgrade. It has high-resolution thermal sensing detectors (generally 640×480 or higher), image enhancement algorithms and non-delayed conversion capabilities. It is widely deployed in military and police sights, hunting aiming, border patrols and unmanned platform optoelectronic systems. The device can be seamlessly clipped on the front end of a day sight or observation mirror, using an uncooled infrared detector to capture the target's thermal radiation image in real time, and projecting a high-contrast thermal map through an OLED/AMOLED screen or an external eyepiece, which can improve target recognition and tracking efficiency in complex environments without zeroing. Compared with basic thermal imagers, enhanced products integrate modules such as image sharpening (Edge Enhancement), multi-band fusion, laser ranging linkage and built-in compass, adapting to tactical requirements such as multi-light source interference, complex background camouflage and rapid environment switching, and gradually becoming the mainstream solution for upgrading thermal sensing modules in modern optoelectronic countermeasure systems.

The global Enhanced Clip-On Thermal Imager market size was estimated at USD 146.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.80% during the forecast period.
