Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Enhanced CMOS Camera competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Enhanced CMOS cameras are a type of high-performance imaging device designed based on traditional CMOS image sensors by integrating multiple image enhancement technologies. This type of camera combines advanced features such as high sensitivity, low noise, wide dynamic range, and high-speed acquisition. Compared with traditional CMOS cameras, enhanced CMOS cameras have better imaging effects in low-light conditions, clearer image details, and higher color reproduction. Some models are also equipped with global shutter technology, which can effectively reduce motion blur; some high-end models integrate low-light noise suppression, image equalization, inter-frame fusion and other functions to improve the overall image quality. In addition, enhanced CMOS cameras usually have higher resolution and frame rate, which can meet the needs of precise acquisition and real-time display in complex scenes, and are key components in modern high-end image acquisition systems.

The global Enhanced CMOS Camera market size was estimated at USD 385.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.20% during the forecast period.
