Report Overview

Polyetherimide (PEI) is a super engineering plastic made by amorphous polyetherimide. It has the best high temperature resistance and dimensional stability, as well as chemical resistance, flame resistance, electrical properties, and high strength. , High rigidity, etc. PEI resin can be widely used in high temperature resistant terminals, IC base, lighting equipment, FPCB (flexible circuit board), liquid conveying equipment, aircraft internal parts, medical equipment and household appliances. The formulation of enhanced PEI can meet various engineering needs. It can be divided into two types, namely glass fiber reinforcement and fiber fiber reinforcement. Glass-reinforced PEI provides greater dimensional stability and improves its electrical and mechanical properties while maintaining excellent processability. Fiber-reinforced PEI is known for its mechanical strength and is therefore preferred in applications such as corrosion protection. The main function of fiber reinforced PEI is to withstand loads, provide strength and stiffness, and replace metal materials in various applications.
