Report Overview

Enhanced Vision System (EVS) refers to an advanced aviation technology designed to improve situational awareness for pilots, particularly in low-visibility conditions such as fog, rain, or darkness. EVS integrates infrared sensors, cameras, and real-time image processing to display critical visual information on cockpit screens, overlaying terrain, obstacles, and runway details that may not be visible to the naked eye. Unlike traditional night vision goggles, EVS operates independently of ambient light and provides a broader field of view, making it highly effective for approach and landing phases. The system is increasingly integrated with Head-Up Displays (HUDs) and synthetic vision systems, forming part of modern avionics suites aimed at enhancing flight safety and operational efficiency. Its adoption spans commercial, military, and business aviation sectors, driven by regulatory support and the growing emphasis on reducing weather-related flight disruptions.

The global Enhanced Vision System EVS market size was estimated at USD 323.67 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.35% during the forecast period.
